

Thank you for being here

& helping us to stream, record and publish (nearly) all

You will:

- **produce** the live stream and recordings
- operate the **cameras and video mixer**
- and **take care** of our equipment (also during do-not-record talks)

... of course with our support

About this meeting

1. How to be camera / mixer angel & **what's new?** (~ 20 min.)
2. How to get a **shift**
3. **Approval** in angel system

Who is who?

Camera Angel

- one per camera
- operates the cameras
- maintains good camera settings

Mixer Angel

- one per lecture hall
- composes images from multiple sources
- mix for live stream and recordings

Audio Mixer

- = video mixing angel
- (un)mute microphones
- adjust amplification for individual microphones
- check audio level (loudness) for stream

VOC Crew – Office

- support in the lecture halls
- responsible for keeping stuff working
- familiar with all equipment in use
- able to fix (nearly) all the issues

General: How to deliver a good video?

Theory

- capture what happens on stage
- make it effortless to follow content
- convey mood in the room

You are the “eye” of the audience in live stream and recording.

More practical: Mixer angel

select the most appropriate images

four view options

“slides only”

“lecture mode”

“speaker close up”

“head to toe / stage”

Mixer Angel: How to choose a view

Lecture mode

✓ When to use:

- best option to combine content and speaker
- slides are important: allows to show new slides immediately (but also the speaker)
- when speaker has many slides or something happens on slides

✗ When not to use:

- difficult for more than one speaker

Mixer Angel: How to choose a view

Slides mode

✓ When to use:

- slides are important (also possible in lecture mode)
 - show new slides **immediately**
 - show slides long enough (= readable twice)
- **small screens** need slides in full screen
- if you need to **cut away**
 - audience is not to be filmed → right option if faces appear
 - your rescue if something is wrong with the cameras

✗ When not to use:

- something more interesting happens on the stage
- the speaker tells a story that is only superficial on the slide
- keep in mind: there is a slides only version of the full video!

Mixer Angel: How to choose a view

Speaker close up

✓ When to use

- focus on the speaker and their story
- show gestures and facial expression
- when objects are shown
- leave the width of one hand above the head
- eyes should be close to the upper third line

✗ When not to use

- Speaker points to slides → use lecture mode to show speaker & slides

Mixer Angel: How to choose a view

Speaker head to toe / stage

✓ When to use

- Shows the complete stage and the people on it
- Heads of the crowd are OK, if it's dark enough
- Speaker is running around: Locked off, do not move camera.

✗ When not to use

- Don't use this view to show the slides – use lecture mode!

Mixing with presets – “NEW!” (since 2025)

The screenshot displays the vactomix interface, which is used for managing video and audio streams. The main window shows a presentation slide titled "Governance von Open-Source-Software im öffentlichen Sektor: Make, Buy or Contribute? Zugabe: Masterportal". The slide includes a graph showing "Informations- und Sachkosten" over "zeit. Entfernung zum Lead User in Stunden" and a hypothesis: "Hypothese: Lead User können lokale Clustereffekte auslösen, ex-ante-Kosten senken und so neuem Partner*innen die Beteiligung vereinfachen." The interface also features a video feed of a speaker, a chat window with messages, and a preset menu. The preset menu is highlighted with a yellow box and contains the following options: CAM1, CAM2, SLIDES, CAM1 SLIDES, CAM2 SLIDES, RETAKE, CUT, and TRANS. The interface is branded with "Fraunhofer" and "vactomix".

1600 - Die Nummer gegen Kummer!
16:50 <sophie> es ist hs2 s10 gemeint
16:51 <mixer3> ok
16:51 <sophie> thanks.
16:52 <sophie> für den wechsel zwischen vortragenden und sessionleiter könnt ihr die slides zwischenschneiden um den schnellen kameraschwenk zu vermeiden
16:52 <mixer2> ok
16:53 <mixer2> danke für den hinweis...wir versuchen es
16:54 <m-mox> |m> Dritte Kamera ;-)
16:54 <sophie> wenn ihr stativ und kameras habt gerne, wir hätten noch inputs am videomixer frei
17:26 <mixer2> (Z1) [2:hackint/#voc-mixer(-nst)]
#voc-mixer

- predefined combinations of cameras and slides (no more mixing up)
- shortcuts are shown on hover; they do only work when this window is selected!

Vocomix: Presets

The screenshot displays the Vocomix interface during a live stream. On the left, there are two camera feeds labeled CAM1 and CAM2. The main display area shows a presentation slide titled "Governance von Open-Source-Software im öffentlichen Sektor: Make, Buy or Contribute?" with a subtitle "Zugabe: Masterportal". The slide content includes a bullet point "Lead User als Multiplikatoren?", a graph showing "Informations- und Suchkosten" over "zeitl. Entfernung zum Lead User in Stunden", and a hypothesis: "Hypothese: Lead User können lokale Clustereffekte auslösen, ex-ante-Kosten senken und so neuem Partner*innen die Beteiligung vereinfachen." The interface also features a "PRESET" menu with options like CAM1, CAM2, SLIDES, and MIX. A yellow box highlights the "SLIDES" and "CAM1 SLIDES" options. To the right of the main display is a "MIX" menu with options like RETAKE, CUT, and TRANS. The bottom of the interface shows a chat log with messages from participants.

Chat log:

```
16:08 - Die Nummer gegen Kummer!
16:50 <sophie> es ist hs2 s10 gemeint
16:51 <mixer3> ok
16:51 <sophie1> thanks.
16:52 <sophie1> für den wechsel zwischen vortragendem und sessionleiter könnt ihr die slides zwischenschneiden um den schnellen kameraschwenk zu verdecken
16:52 <mixer2> ok
16:53 <mixer2> danke für den hinweis...wir versuchen es
16:54 <M-mox> [m- Dritte Kamera ;-)
```

Step 1: select view [red = current, green = next]

Step 2: change view [trans = soft, cut = hard]

Communication is key!

“Please prepare camera X.” – “Please adjust the image in \$shot.” – “Camera X is live / on.”

Four main camera shots:

→ “Please zoom out.” (“Bitte Zoom aufziehen. Rauszoomen.”)

lecture mode approved

speaker behind lectern
→ **(speaker) close-up**
 (“Halbnah”)

speaker on stage
→ **(speaker) medium / American**
 (“Halbtotale”)

speaker on stage
→ **(speaker) head to toe** (“Ganzkörper”)

stage
→ **long shot**
 (“Totale”)

← “Please zoom in.” (“Bitte Zoom ranziehen. Ranzoomen.”)

Get to know each other:

What makes you feel (un)comfortable? How experienced is the camera angel? Are pans okay?

What if...

something unexpected happens?

- think about an emergency strategy
 - something is obvious wrong on the slides / screen (e.g. personal information on screen is shown)
 - show speaker
 - something is obvious wrong with the speaker / camera (medical emergencies, broken camera...)
 - show slides
- everything else / not sure: just continue operating
- if too much and you don't want to decide: show full stage

In general: just go on.

I need special configuration?

- document camera → available when announced in advance

Mixing angel – more important than you might think

for the audience in the lecture hall

switch between presentation and info beamer

cut away from infobeamer before the Herald starts with announcements, cut back after the last applause has finished

for the audience on the sofa

bring the congress spirit to the sofa

leave room at the start and end of a talk, start streaming with the herald's opening announcements

Mixing angel – more important than you might think

The screenshot displays the Voctomix interface, which is used for managing live streams. The main window shows a presentation slide titled "Governance von Open-Source-Software im öffentlichen Sektor: Make, Buy or Contribute? Zugabe: Masterportal". The slide includes a graph showing "Informations- und Suchkosten" over time, with a hypothesis that lead users can trigger local cluster effects and reduce costs. The interface also features a "MIX" control panel with buttons for "LIVE", "BREAK", "CAM1", "CAM2", "SLIDES", "CAM1 SLIDES", "CAM2 SLIDES", "RETAKE", "CUT", and "TRANS". A "BLINDS" section is visible on the left, and a "STREAM" section at the bottom. A chat window at the bottom left shows messages from participants like "sophie", "mixer3", "sophiel", "mixer2", and "M-mox".

1608 - Die Nummer gegen Kummer!
16:50 <sophie> es ist hs2 s10 gemeint
16:51 <mixer3> ok
16:51 <sophiel> thanks.
16:52 <sophiel> für den wechsel zwischen vortragendem und sessionleiter könnt ihr die slides zwischenschneiden um den schnellen kameraschwenk zu vermeiden
16:52 <mixer2> ok
16:53 <mixer2> danke für den hinweis...wir versuchen es
16:54 <M-mox> [m- Dritte Kamera ;-)

Step 1: switch to speaker's presentation
(if panel exists – else a/v tech will take care)

Step 2: start live stream

Audio

- (un)mute speakers / laptop output (ask before talk if laptop sound is needed)
- if necessary: adjust room loudness ("pa")

Audio

Lost? → These buttons will bring you back.

Usual talk timeline

0. PREPARATION

- Your shift starts (please be on time).
- Overlapping shifts allow time for handover.
- Get to know your fellow angels
- Get to know your equipment: check camera / mixer

1. MAIN PART

- Mixer: Put speaker's presentation on beamer & start live stream
- Talk starts with an introduction by the herald
- Speaker starts talk
- Q&A session
- Talk ends with "thank you" and applause
- Mixer: Stop live stream

2. HAND OVER

- Hand over to the next angels & leave a clean desk.

You're not alone:
Please use the checklists!

<https://github.com/voc/checklists/blob/main/source/talk.pdf>

Example talk – one camera, one mixer

speaker & herald

Set the atmosphere: Show speaker and moderator.

Zoom: show speaker in medium close up

Slides: Time to figure out: how will the speaker behave?

Lecture mode: show face & gestures, more inviting to follow the talk

Camera: Speaker in close up, because she is telling an interesting story, follow the speaker's eyeline

start: only speaker

Camera: Show the speaker.

Lecture mode: Continue showing speaker, but also the slides.

Slides: show the slides in full screen because they are detailed and small

Camera: speaker tells side story, show speaker and gestures

Lecture mode – Show slides and speaker

In general: Don't be too cutty – Pace your videos temperately. Do not cut too often.

Camera: Sony PXW-Z200

Focus - control sharpness
(*Please use autofocus.*)

Zoom - vary the focal length

Iris - will have to be adjusted,
depending on light situation (*If
you change something, tell
other camera angels to change
it the same way in all cams.*)

Camera: Sony PXW-Z200

Zoom

- For smooth zoom use the zoom buttons.
- Gentle touch → slow zoom

Camera: Sony PXW-Z200

Display Sony

[Recording Indicator]

The recording must always run, even during the break.

[AF = Auto Focus on]

Use autofocus!

[SD Card Time Remaining]

It must have enough remaining time before talk.

Tripod: Sachtler ace

Who to Contact?

- Generic Questions? Something is wrong in lecture hall?
 - text us via the chat (mixer laptop, bottom)
- Do you want to talk to us? Visit our C3VOC Office
 - **Room 105**; follow the winkekatze :)
